

Protecting and improving the nation's health

# Local suicide prevention planning 2017

In partnership with

National Suicide Prevention Alliance

### About this resource

This slide set has been produced by Public Health England to support local areas in their suicide prevention planning and action. It is intended for directors of Public Health, local authority leaders, chief executives and other senior officers and councillors.

Further resources available on PHE and NSPA's websites:

- Local suicide prevention planning: a practice resource
- Identifying and responding to suicide clusters and contagion: a practice resource
- Preventing suicides in public places: a practice resource
- Preventing suicide among lesbian, gay and bisexual young people

Data on suicides by local authority is available in the <u>Suicide</u> <u>Prevention Profile</u> (also referred to as the Fingertips Tool)

> National Suicide Prevention Alliance

- 1. National suicide prevention strategy and policy context

Protecting and improving the nation's health

### Section 1

National suicide prevention strategy and policy context

# National suicide prevention strategy: further action in five areas

### HM Government

### Preventing suicide in England:

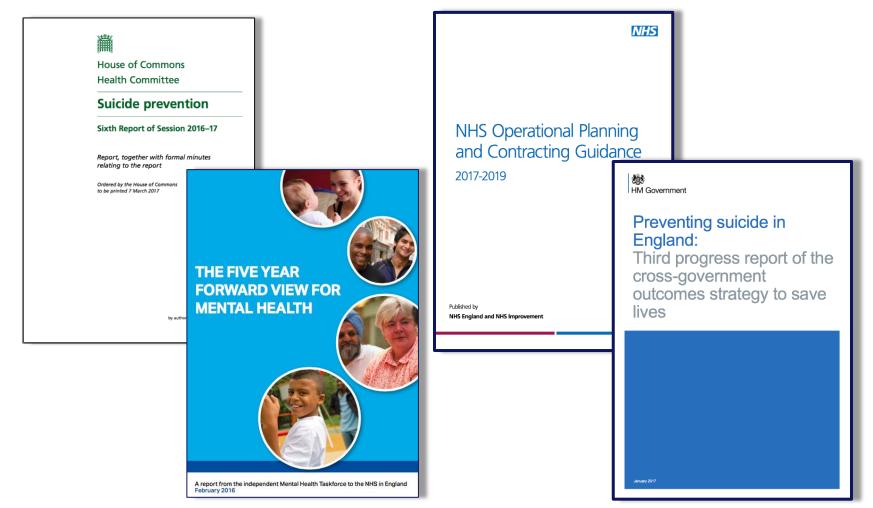

Third progress report of the cross-government outcomes strategy to save lives

- every local area to produce a multi-agency suicide prevention plan
- better targeting of suicide prevention and help seeking in high risk groups
- expand scope to include self-harm prevention
- improve responses to bereavement by suicide and support services
- improve data at national and local levels

## National policy context

Protecting and improving the nation's health

### Section 2

# Ten essential things to know about suicide prevention

### Suicide prevention: Ten essential things to know

1.	Suicides take a high toll
2.	There are specific groups of people at higher risk of suicide
3.	There are specific factors that increase the risk of suicide
4.	Preventing suicide is achievable
5.	Suicide is everybody's business

### Suicide prevention: Ten essential things to know

- **6.** Restricting access to the means for suicide works
- 7. Supporting people bereaved by suicide is an important component of suicide prevention strategies
- 8. Responsible media reporting is critical
- **9.** The social and economic cost to suicide is substantial and adds to the case for suicide prevention work
- **10.** Local suicide prevention strategies must be informed by evidence

### Suicide prevention: Ten essential things to know

### Suicides take a high toll

The impact of suicide is far-reaching and it remains with family, friends, colleagues and many others long after the individual has gone. The bereavement is often detrimental to performance at work, personal relationships, behaviour and wellbeing.

Anj Handa bereaved friend

#### Death by suicide in England in 2016

A conservative estimate of 10 people directly affected by each of these deaths gives a minimum total of almost 50,000 people annually who could benefit from support after suicide

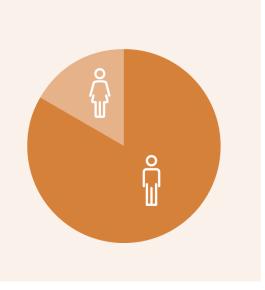

In partnership with

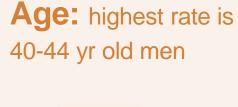

50,000

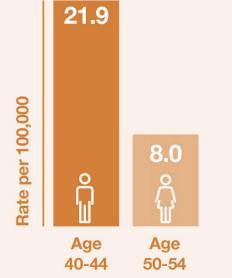

# There are specific groups of people at higher risk of suicide

**Gender:** 75% of suicides are by men

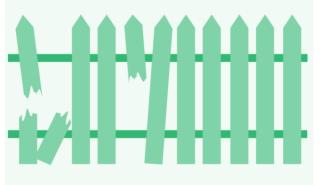

Social-economic status: people living in

the most deprived areas are **ten times** more at risk of suicide than those in the most affluent groups living in the most affluent areas

# There are specific factors that increase the risk of suicide

**Mental ill-health:** 

**Occupation:** Men in lowest skilled occupations had a 44% higher risk of suicide and men and women who are managers, directors and senior officials have a 70% lower risk

**1 in 3** Around 1 in 3 people who die by suicide are known to mental health services

**Self-harm**: 50% of people who die by suicide had a history of self-harm

### Suicide is everybody's business

"Preventing suicide is a jigsaw, which requires many pieces to come together."

Professor Jim McManus Director of Public Health Hertfordshire County Council

# Restricting access to the means for suicide works

This is one of the most evidenced aspects of suicide prevention and can include physical restrictions, as well as improving opportunities for intervention.

Supporting people bereaved by suicide is an important component of suicide prevention strategies

Friends and relatives of people who die by suicide have a 1 in 10 risk of making a suicide attempt after their loss

People bereaved by suicide are 80% more likely to drop out of education or work than their peers, while 8% of young adults bereaved by suicide surveyed had dropped out of an educational course or a job since the death

## Responsible media reporting is critical

The social and economic cost to suicide is substantial and adds to the case for suicide prevention work

**£1.67m** The cost of a suicide has been calculated as £1.67m

**70%** of that figure representing the emotional impact on relatives.

Protecting and improving the nation's health

### Section 3

### Understanding data

In partnership with
National
Suicide Prevention
Alliance

## Using national and local data

### National data:

- ONS data
- Public Health Outcomes Framework
- PHE suicide prevention profile
- Network Rail database

### Local data:

- Audit of coroner's records
- Data held by other partners such as primary care and employers
- Real-time suicide surveillance

Local suicide prevention planning

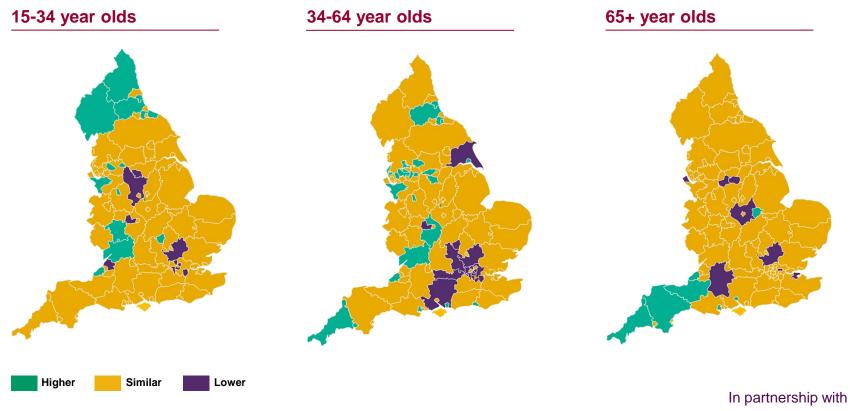

### Suicide prevention profile

Protecting and improving the nation's health

### Section 4

Strategy and action

Suicide Prevention Alliance

### Importance of partnerships

A wide range of representatives working with adults, children and young people may be brought together to contribute to a multi-agency suicide prevention group

The group may be led by public health or an elected champion

There can also be a wider network that feeds in for specific projects or on specific topics

## Involving people with lived experience

- Contribute a more complete picture of suicide and suicide prevention
- Identify issues that clinicians and commissioners might not be aware of
- Highlight gaps between policy and practice
- Help to ensure work is grounded in the reality of the impact of suicide and self-harm

### National Survivor User Network framework

### Strategy and action plan development

- Statement of support from a local leader
- Case for suicide prevention locally
- Clearly stated ambition and objectives
- Approach to monitoring and evaluating outcomes
- Priority areas for action based on national strategy

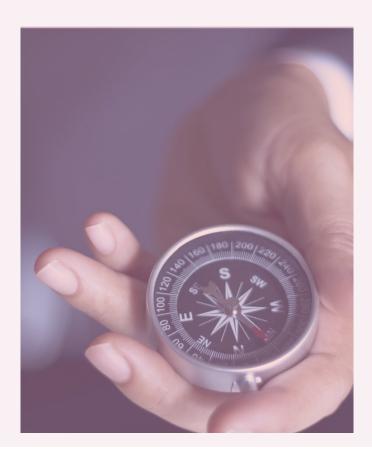

- Priority areas based on local data and needs
- Links with other strategies including Prevention Concordat

## Mapping to other agendas

Joint strategic needs assessment Mental health and wellbeing strategies Crisis care concordats Sustainability and transformation plans Children & young people's services transformation plans Commissioning of substance misuse

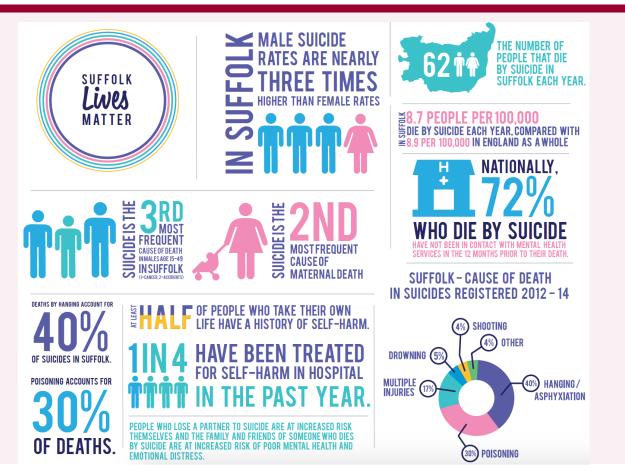

#### In partnership with

services

### Making the case

### Making the case

Reasons people take their own lives, including intelligence and data about local factors

Public health profile, including any particular populations at risk of suicide

Financial and human cost of suicide and the cost effectiveness of suicide prevention

National policy context for local action

Potential return on investment

## Accountability

Should lie with the Health & Wellbeing Board

Provide crucial influence and support for successful implementation

Other lines of accountability may include Safeguarding Adults Board and Children & Families Partnership Board

Regional collaboratives require accountability mechanism e.g. strategic partnership board

## Priority areas for local strategies

National strategy provides a readymade framework

Priorities should be informed by evidence from national and local data

Begin with small number of areas for immediate action and build over time

'Refreshed' strategy reaffirms key priorities including self-harm and suicide bereavement

## Priorities: by Professor Louis Appleby

(Leads the National Suicide Prevention Strategy for England)

## Monitoring and evaluation

Be clear from the outset how effectiveness and impact will be measured

Set outcome measures, ultimately this is a reduction in suicides but should not be the only outcome measure:

- Suicide attempts and self-harm
- Help-seeking
- Engagement with services
- Perceived reduction in stigma

Protecting and improving the nation's health

### Section 5

Ideas and resources:

- People bereaved by suicide
- Occupation

### People bereaved by suicide

### **Postvention**

Describes activities developed by, with, or for people who have been bereaved by suicide, to support their recovery and to prevent adverse outcomes, including suicide and suicidal ideation.

# An di 50,000

The cost of a suicide has been calculated as **£1.67m** 

**70%** 

of that figure representing the emotional impact on relatives

### Around **50,000** people are directly affected by each suicide.

### Suicide postvention: Ten essential things to know

1.	Postvention is an essential part of public health
2.	The scale of the problem
3.	Suicide affects a wide range of people
4.	There is significant unmet need for support
5.	The health and economic case for action is building

### Suicide postvention: Ten essential things to know

- 6. Postvention supports work on wider social issues
- 7. People want different types of support
- **8.** We can learn from what others are doing
- **9.** Local postvention programmes rely on strong partnerships
- **10.** Evaluation of outcomes is important

### Specific actions for postvention

Effective and timely emotional and practical support, to help the grieving process and support recovery

Effective responses to the aftermath of a suicide

Information and support for families, friends and colleagues who are concerned about someone who may be at risk of suicide

### Resource for people bereaved by suicide

## **Resources on postvention services**

Supported by Public Health England

## Suicide by occupation

Men in lowest skilled occupations had a **44% higher** risk of suicide

Men in skilled trades had a 35% higher risk

Managers, directors and senior officials **70% lower** for both sexes

# Why are these occupations at risk?

The analysis does not provide any evidence on causation

However, there are three broad reasons why an occupation may carry a high risk of suicide:

- 1. people at higher risk selectively go into it, for example socioeconomic determinants
- 2. something about the occupation adds to risk job-related conditions
- 3. access to means people in it have access to, or knowledge of, a suicide method that is more likely to be fatal.

### Section 6

# Suicide takes a high toll

"The impact of suicide is far-reaching and it remains with family, friends, colleagues and many others long after the individual has gone. The bereavement is often detrimental to performance at work, personal relationships, behaviour and wellbeing."

Anj Handa Bereaved friend

in parateristrip with

### Every death has a profound impact

"Every life lost represents someone's partner, child, friend or colleague, and their death will profoundly affect people in their family, workplace, club and residential neighbourhood."

Hamish Elvidge Bereaved parent, Chair of Matthew Elvidge Trust

ու բառությութ տու

## Suicide is preventable

"Suicide is preventable and we must all work together to develop community based suicide prevention plans and activities that reach out to every part of England."

Hamish Elvidge Bereaved parent, Chair of Matthew Elvidge Trust

ու բառությութ տու

## Role of public health

"Building an approach to suicide reduction and prevention is an area where public health can and should excel in bringing the full range of our skills in the service of our citizens. We each need to undertake a proper assessment of risk and protective factors and influences, an analysis of the wider situation and the engagement and influencing of stakeholders in order to deliver the necessary cross-system action plan."

### **Professor Jim McManus**

Director of Public Health, Hertfordshire County Council

# Preventing suicide is a jigsaw

"Preventing suicide is a jigsaw, which requires many pieces to come together."

**Professor Jim McManus** 

Director of Public Health, Hertfordshire County Council

### Lives are important

"Suicide is preventable, we have to remember that. That's why we have to take more action to let people know their lives are important because when suicidal thoughts are at their strongest it's hard for people to see their own worth."

James Withey The Recovery Letters

In particionip with

## Opportunity to identify and support

"Developing effective and comprehensive local suicide prevention strategies provides the opportunity to identify and support people at risk when they are at the crux of their lives."

James Withey The Recovery Letters

In particionip with

### About National Suicide Prevention Alliance

The NSPA is an alliance of public, private and voluntary organisations in England who care about suicide prevention and are willing to take individual and collective action to reduce suicide and support those bereaved or affected by suicide.

Membership enables organisations to share good practice, network and collaborate, as well as amplifying our voice by speaking together.

It's free to join!

For more information contact info@nspa.org.uk

www.nspa.org.uk

### **About Public Health England**

Public Health England exists to protect and improve the nation's health and wellbeing, and reduce health inequalities. We do this through world-class science, knowledge and intelligence, advocacy, partnerships and the delivery of specialist public health services. We are an executive agency of the Department of Health, and are a distinct delivery organisation with operational autonomy to advise and support government, local authorities and the NHS in a professionally independent manner.
