

## Annual Road Maintenance programme 2023-24

This document was last updated on **31<sup>st</sup> October 2023**. We aim to update the PDF on the website every month during the programme.

Residents on each road will be contacted directly prior to works beginning with exact dates.

### About the programme

Each year, Wokingham Borough Council invests millions of pounds repairing roads across the borough through its annual maintenance programme. Roads are assessed and monitored throughout the year using a range of techniques, which informs the plan for the coming year.

We have four types of treatment and resurfacing that we use:

- Full resurfacing is a more extensive treatment, which involves removing layers of a worn out road surface and replacing this with new material.
- Surface dressing adds protection to the carriageway surface, sealing it from water while also enhancing its skid resistance. This protection can extend the life of the carriageway surface by up to 10 years.
- Micro asphalt surface treatment is a preventative maintenance treatment, used to seal the existing road surface, improve the texture and helps water evaporate. This type of surface treatment can prolong the life of a road by up to 10 years. It is mostly used in residential areas with slower moving traffic.
- Asphalt Preservation is a cost-effective preventative treatment, which adds protection to the carriageway surface. A bituminous sealant is applied to the road surface, which seals cracks and prevents pothole formation. This protection can extend the life of the carriageway surface by up to 5 years.

We will also be carrying out some additional works on footpaths and roads this year. This document contains the planned works for 2023-24, although dates are subject to change.
